

Technology Stack

Date	30 September 2026
Team ID	SWTID-2026-8305
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	ServiceNow Platform UI + JavaScript	The Incident form is served by the ServiceNow UI. UI Policies and Client Scripts written in JavaScript run in the browser, so field behaviour changes instantly without a page reload.

2	Backend / Server-Side	ServiceNow Now Platform (Incident application)	The platform saves and processes incident records. No separate backend code is needed because validation is done on the client before the record is saved.
3	Database / Data Storage	ServiceNow built-in database (incident table)	Stores the Incident records and the UI Policy and Client Script configuration records. It is fully managed by the platform, so no database setup is required.
4	Cloud / Hosting / Deployment	ServiceNow Personal Developer Instance (PDI)	A free cloud-hosted instance for building and testing. No servers to install or maintain, and it opens in any modern browser.
5	Version Control & CI/CD	GitHub	Hosts the project submission repository and documents for team collaboration and review. No CI/CD pipeline is needed for this configuration-based project.

6	Third-Party APIs / Other Tools	ServiceNow client APIs (g_form, g_user)	g_form is used in the Client Scripts to read and set field values, show messages and stop a save. A modern browser (Chrome, Edge or Firefox) is used to run and test the form.
