

Project Executable Files

Date	15 March 2026
Team ID	SWTID-2026-8305
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	3 Marks

Project Executable Files

This section lists all executable and deployable items for the project. The project is built entirely on the ServiceNow platform as configuration records (UI Policies, UI Policy Actions and Client Scripts) on a Personal Developer Instance, so there are no separate application files to install. The evaluator can open the hosted instance and follow the run instructions below.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Overview of the project's structure (ServiceNow records instead of files):

```
ServiceNow Personal Developer Instance (Application: Global)
|
|-- System UI > UI Policies
|   |-- UI Policy on Incident           - conditional field behaviour (mandatory / message)
|   |-- UI Policy Action: Urgency      - makes Urgency read-only based on Impact
|
|-- System Definition > Client Scripts (table: Incident, UI Type: Desktop)
|   |-- onChange Client Script         - reacts when a field value changes
|   |-- onSubmit Client Script         - save validation
|   |-- Prevent state change via list edit (onCellEdit, field: State)
|
|-- /docs (project documents)
|   |-- Project Planning, Coding & Solution, Performance Testing, Project Documentation (PDF)
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://dev301246.service-now.com (ServiceNow Personal Developer Instance)
Login Credentials (Demo)	Email: khvarshadevi555@gmail.com Password: J5AiDamR
Platform / Hosting Provider	ServiceNow (cloud-hosted Personal Developer Instance)
Repository Link	https://github.com/VarshaDevi21/Naan-Mudhalvan-
Demo Video Link	https://drive.google.com/file/d/1BhmvBjVNcBjm0UWHhcywjJF-rdP0it1r/view?usp=sharing

Step 4: Run Instructions

Step-by-step instructions for the evaluator to run and verify the project:

Pre-requisites:

ServiceNow Personal Developer Instance (or any instance with Incident Management enabled); a user with the admin or developer role; access to the Incident application and form; a modern browser (Chrome, Edge or Firefox); basic JavaScript knowledge.

Step 1: Open the instance URL and log in with the demo credentials above.

Step 2: Go to **System UI > UI Policies** and open the Incident UI Policy to view its conditions and actions.

Step 3: Go to **System Definition > Client Scripts** and open the onChange, onSubmit and onCellEdit scripts on the Incident table.

Step 4: Open **Incident > All**, open an incident and set Impact to High to see the UI Policy and Urgency behaviour; set it back to Medium to see it reverse.

Step 5: Try saving an incident with invalid or missing data to see the onSubmit validation.

Step 6: In the Incident list view, double-click the State cell and change it to see the onCellEdit alert.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	A free Personal Developer Instance goes to sleep after a period of inactivity.	Wake it from the ServiceNow Developer site, then log in again.
2	The scripts are configured for the Desktop UI type only.	Extend the UI Type to All if mobile support is needed.
3	Only manual single-user testing was done; load and timing metrics were not measured.	Planned as future work (see Performance Testing report).
