

Scalability & Future Plan

Date	15 March 2026
Team ID	SWTID-2026-8305
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Scripts are set for the Desktop UI type only.	Mobile and other UI users do not get the same field behaviour.	Medium
2	Only manual single-user testing was done; no load or timing numbers were measured.	Behaviour with many users at the same time is not yet known.	Medium
3	The solution runs on a free Personal Developer Instance, which can sleep when unused.	The evaluator or team may need to wake the instance before using it.	High

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Checks run in each user's browser; tested with a single user.	Run load tests with several users and record response times on a larger instance.
2	Data Storage	Uses the existing Incident table; no custom table or extra storage.	Keep the same design so no new storage is needed; follow ServiceNow archiving for old incidents.
3	Performance	No extra server calls for the checks, but timings were not measured.	Measure page load and save times, keep scripts short and use UI Policies where a script is not needed.
4	Security	Client Scripts run in the browser and can be bypassed; only admin/developer roles can change them.	Add matching server-side rules (Business Rules / ACLs) so the same checks are enforced on the server.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Extend the UI Policies and Client Scripts to other tables such as Problem and Change.	Q4 2026	Same helpful form behaviour across more ServiceNow forms.
Phase 3	Support the mobile UI type and add server-side Business Rules / ACLs for the same rules.	Q1 2027	Works for mobile users and cannot be bypassed.
Phase 4	Package everything in a scoped application and run load testing with multiple users.	Q2 2027	Easy to install, reuse and prove at scale.
