

Empathy Map

Date	30 September 2026
Team ID	SWTID-2026-8305
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "Why is this incident missing details?" • "I keep going back to the caller for info." • "Please fill in all the required fields."	THINKS • The form should guide me as I type. • Wrong input wastes everyone's time. • Automation could remove this rework.
DOES • Logs incidents in ServiceNow every day. • Edits tickets later to add missing details. • Manually double-checks fields before saving.	FEELS • Frustrated by repeated rework. • Stressed about missing SLA targets. • Confident when the form validates input.

ARJUN
(Service Desk Agent)
